

Ghana

The U.S. government, through the President's Emergency Plan for AIDS Relief (PEPFAR), is partnering with the people and the Government of Ghana to accelerate progress toward achieving HIV/AIDS epidemic control, with a focus on the following priorities:

- Accelerating the implementation of the national Treat All policy, which aims to provide lifesaving antiretroviral treatment (ART) to all people living with HIV, and differentiated models of care for HIV service delivery
- Bolstering ART coverage and high-quality service delivery through targeted testing, increased initiation, retention, and viral suppression of those on treatment
- Enhancing laboratory capacity and service delivery to improve the quality of HIV rapid testing and the efficiency and cost-effectiveness of viral load testing
- Supporting data systems that allow tracking of patients across the cascade
- Strengthening management systems at all levels to maintain an uninterrupted supply of health commodities
- Developing and scaling of successful models for key and priority populations service delivery, particularly follow-up and tracking of key populations living with HIV

Progress Toward Reaching Epidemic Control

Progress to UNAIDS 90-90-90 Targets in Adults*
