

Malawi

The U.S. government, through the President's Emergency Plan for AIDS Relief (PEPFAR), is partnering with the people and the Government of Malawi to accelerate progress toward achieving HIV/AIDS epidemic control, with a focus on the following priorities:

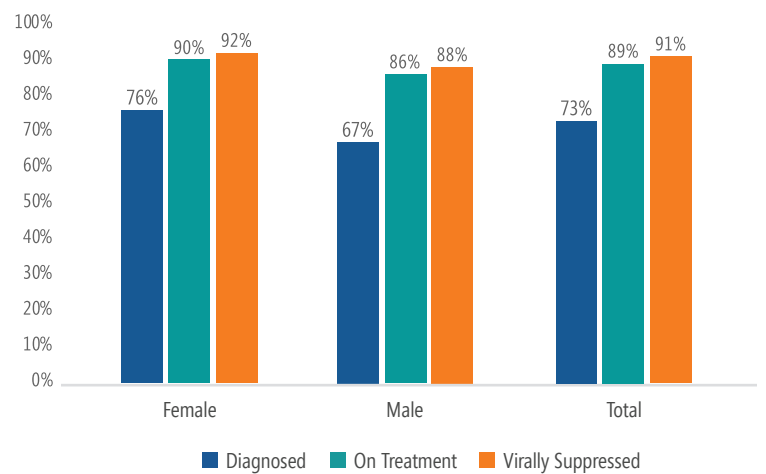

- Focusing on 10 high-burden, "scale-up" or "acceleration" districts that constitute most of national gap to saturation, as identified in the Malawi Population-Based HIV Impact Assessment
- Scaling up the most efficient and effective testing strategies to reach PLHIV that remain underserved, namely men and youth
- Reducing HIV incidence among adolescent girls and young women (AGYW) through primary prevention via Determined, Resilient, Empowered, AIDS-free, Mentored, and Safe (DREAMS) programs and other AGYW-targeted interventions
- Expanding evidence-based primary prevention to reach young men with voluntary medical male circumcision
- Increasing the use of viral load testing and its results for clinical decision making, including viral load-guided differentiated service delivery
- Using site-level data to refine program strategies in real time

Progress Toward Reaching Epidemic Control

Population-Based HIV Impact Assessment

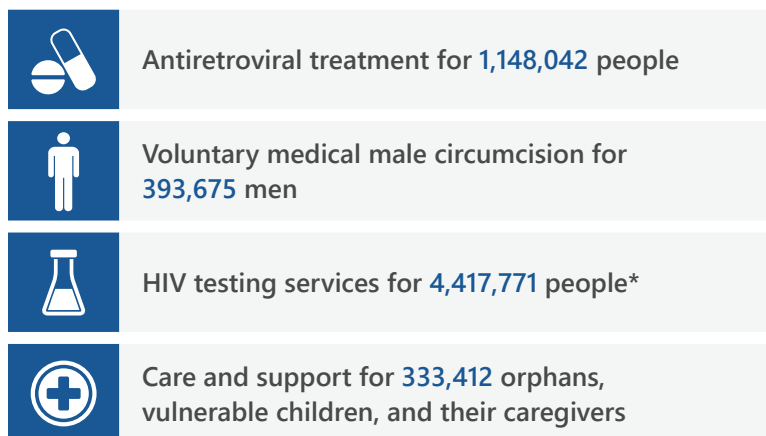

Progress to UNAIDS 90-90-90 Targets (15-64 years of age)
