Focusing on high-burden, “scale-up” or “acceleration” districts that constitute 70 percent of the national gap to saturation, as identified in the Malawi Public Health Impact Assessment.

- Reducing the HIV incidence among adolescent girls and young women (AGYW) through testing and treatment of potential sexual partners, usually men ages 15-40, and primary prevention through the expansion of Determined, Resilient, Empowered, AIDS-free, Mentored, and Safe Women (DREAMS) programs and other AGYW-targeted interventions.

- Targeting men and youth with the most efficient testing modalities and treatment strategies to achieve saturation across all age and gender bands in scale-up districts.

- Improving program-wide partner management for increased performance and impact by identifying and leveraging efficiency gains through the collection and use of more granular data.

- Expanding more efficient and effective testing strategies and treatment modalities to increase yields and decrease burdens on facilities.

- Scaling up evidence-based primary prevention to reach young men with voluntary medical male circumcision and testing services.

- Enhancing key populations prevention and treatment programming by focusing primarily in sex worker hot spots and continuing advocacy with the Ministry of Health on pre-exposure prophylaxis and prisons.

The U.S. government, through PEPFAR, is proud to partner with the people and Government of Malawi in accelerating Malawi’s progress toward achieving HIV/AIDS epidemic control. In Fiscal Year 2018, with a focus on 10 high-burden districts in Malawi to maximize impact, the partnership will include the following specific priorities:

- Antiretroviral treatment for 658,283 people
- Voluntary medical male circumcision for 323,011 men
- HIV testing services for 3,606,954 people
- Care and support for 164,558 orphans, vulnerable children, and their caregivers

Total PEPFAR Investment (FY 2004-2017): $839,473,000

PEPFAR Results in Malawi
(through September 2017)

- Antiretroviral treatment for 658,283 people
- Voluntary medical male circumcision for 323,011 men
- HIV testing services for 3,606,954 people
- Care and support for 164,558 orphans, vulnerable children, and their caregivers

HIV/AIDS Epidemic in Malawi (end of 2016)

- Number of people living with HIV: 1,000,000
- Number of new HIV infections in 2016: 36,000
- Number of AIDS-related deaths in 2016: 24,000
- People living with HIV who know their status: 73%3,4
- People who know their status and are on ART: 89%3,4
- People on ART who have achieved viral suppression: 91%3
