

# Rwanda

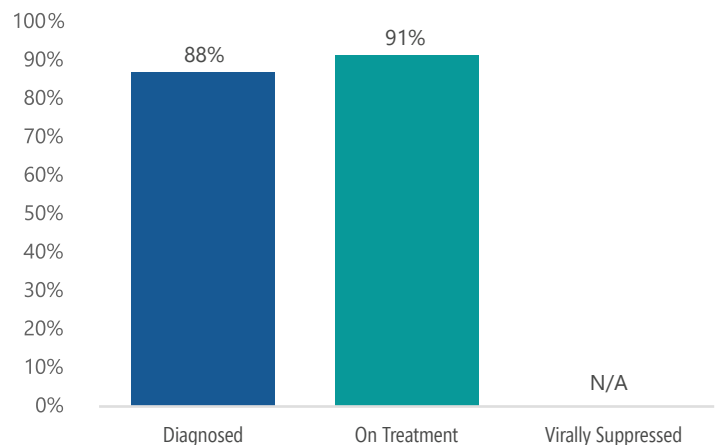

The U.S. government, through the President's Emergency Plan for AIDS Relief (PEPFAR), is partnering with the people and the Government of Rwanda to accelerate progress toward achieving HIV/AIDS epidemic control, with a focus on the following priorities:

- Increasing partner performance and identifying and leveraging efficiency gains through the collection and use of more granular data disaggregated by age, sex, and site level
- Accelerating the implementation of the Government of Rwanda's Test and Start policy, which aims to provide lifesaving antiretroviral treatment to all people living with HIV as well as a new differentiated service delivery model with multi-month scripting
- Scaling up the highest-yield HIV testing services strategies, including extending hours for testing in Kigali, index testing, recency testing, self-testing, and testing among key populations and priority populations, to help reach those who are otherwise less likely to access testing
- Reaching key populations, including through development of a national strategy for female sex workers (FSW), as well as adolescent girls and young women ages 10-24 and young men ages 25-35 to prevent infection and interrupt transmission
- Directing funding to local civil society organizations for community-based activities and orphans and vulnerable children programs
- Leveraging the orphans and vulnerable children platform to implement a layered DREAMS-like (supporting Determined, Resilient, Empowered, AIDS-free, Mentored, and Safe women) core package of services in five districts
- Accelerating access to voluntary medical male circumcision for boys and young men, including through dedicated campaigns, service provision at existing gathering locations, and later service hours
- Reaching and testing high-risk mothers and their infants, especially FSW, to support prevention of mother-to-child transmission of HIV

## Progress Toward Reaching Epidemic Control

## Progress to UNAIDS 90-90-90 Targets in Adults\*
