

# Nigeria

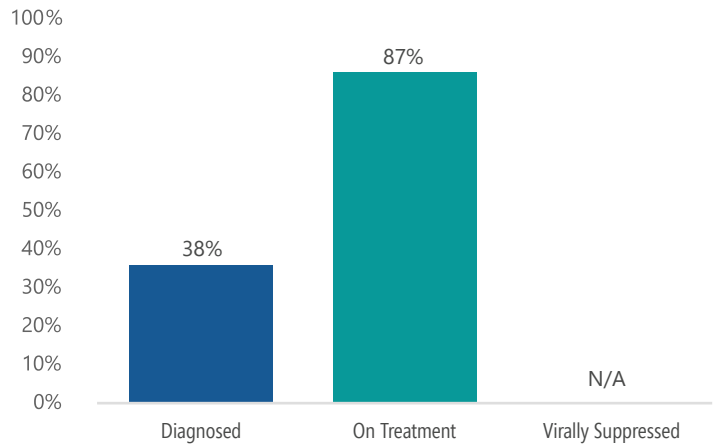

The U.S. government, through the President's Emergency Plan for AIDS Relief (PEPFAR), is partnering with the people and the Government of Nigeria to accelerate progress toward achieving HIV/AIDS epidemic control, with a focus on the following priorities:

- Utilizing the results of the world's largest surveillance of HIV incidence, prevalence, and viral load suppression rates to optimize resource allocation
- Improving case finding through self-testing, partner notification services, same-day initiation of lifesaving antiretroviral treatment (ART), and gender-sensitive approaches as part of a national Test and Start implementation
- Mobilizing resources from low-volume, low-yield sites to higher-yield sites located in geographic areas with both high unmet need for services and high HIV prevalence
- Scaling up approaches targeting services based on age and sex disaggregated data, highlighting those most in need of prevention and treatment services
- Reducing discrimination of people living with HIV in health care settings, particularly for key populations
- Increasing targeted HIV testing and linkage to treatment for men who have sex with men
- Increasing HIV testing in high-prevalence, antenatal care settings to prevent mother-to-child transmission, eliminating treatment access fees that preclude receipt of ART for low-income patients

## Progress Toward Reaching Epidemic Control

## Progress to UNAIDS 90-90-90 Targets in Adults
