

Cameroon

The U.S. government, through the President's Emergency Plan for AIDS Relief (PEPFAR), is partnering with the people and the Government of Cameroon to accelerate progress toward achieving HIV/AIDS epidemic control, with a focus on the following priorities to begin changing the course of their pandemic:

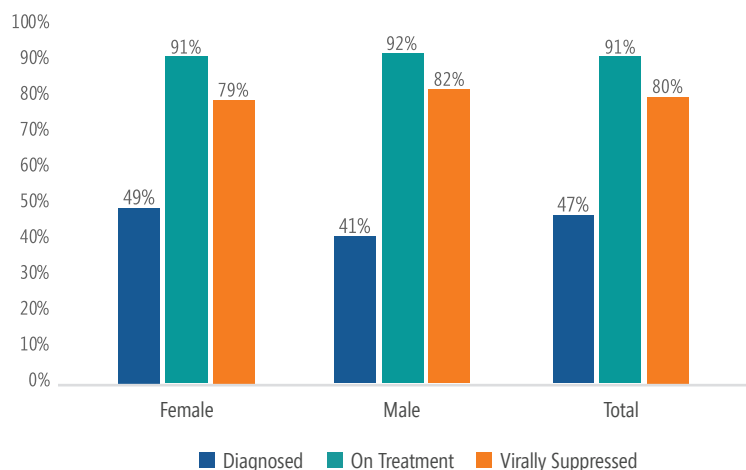

- Focusing on high-yield testing strategies to identify HIV positives, namely index patient testing, HIV self-testing, and testing in high-yield entry points to services
- Working closely with the national network of people living with HIV to reach, test, and link underserved youth ages 15-24 and men
- Strengthening pediatric case finding and linkage to treatment
- Introducing pre-exposure prophylaxis for high-risk individuals
- Scaling same-day antiretroviral treatment initiation and differentiated models of care nationally including viral load testing
- Addressing public sector formal and informal fees that disproportionately impact the most vulnerable groups

Progress Toward Reaching Epidemic Control

Population-Based HIV Impact Assessment

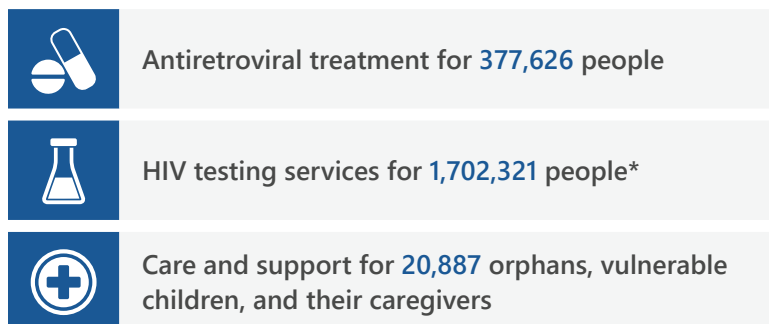

Progress to UNAIDS 90-90-90 Targets (15-64 years of age)
