## U.S. President's Emergency Plan for AIDS Relief

### What is PEPFAR?

The U.S. President's Emergency Plan for AIDS Relief (PEPFAR) is a U.S. government global initiative to control the HIV/AIDS pandemic. It is the largest commitment by any nation toward a single disease. Over the past decade, the U.S. government has committed more than \$65 billion to bilateral HIV/AIDS programs, the Global Fund to Fight AIDS, Tuberculosis and Malaria, and bilateral tuberculosis programs. To achieve an AIDS-free generation, PEPFAR works closely with a variety of stakeholders including partner countries, multilateral organizations, civil society, people living with and affected by HIV, the faith community, and the public and private sectors.

PEPFAR is coordinated by the Office of the Global AIDS Coordinator and implemented by the following U.S. government entities:

- Department of State
- Department of Labor
- Department of Health and Human Services
- U.S. Agency for International Development
- Department of Commerce
- Department of Defense
- Peace Corps

### What are PEPFAR's priorities?

With a focus on transparency, accountability, and impact, PEPFAR is actively working with partners to control the HIV/AIDS pandemic to help achieve an AIDS-free generation. PEPFAR is committed to supporting activities that are grounded in science and critical to saving lives and preventing new HIV infections.

#### PEPFAR's core activities focus on:

- **Combination prevention** – prevention of mother-to-child transmission; antiretroviral treatment; provision of condoms; and voluntary medical male circumcision
- **Orphans and vulnerable children** – holistic services for families
- **Neglected and hard-to-reach populations** – pediatrics; adolescent girls; and key populations
- **Health systems** – human resources for health; commodity procurement, supply chains; and laboratory systems

### What is the path to an AIDS-free generation?

The goal of achieving an AIDS-free generation is a shared responsibility with partner countries in the central convening role. Neither the U.S. nor any other single entity can accomplish this goal alone. It requires all partners to intensify their efforts, which includes supporting partner countries to effectively coordinate all those providing financing and technical support, as well as implementing programs within and outside of the health sector.

Putting country leadership – both government and civil society – in an empowered and accountable position to meet the needs of their populations will advance the goal of a successful and sustainable HIV response. The United States has made an unwavering commitment to work with partner governments and other stakeholders to turn the tide on HIV/AIDS. The continuation of this close partnership is essential to achieving the shared goal of an AIDS-free generation.
