

South Africa

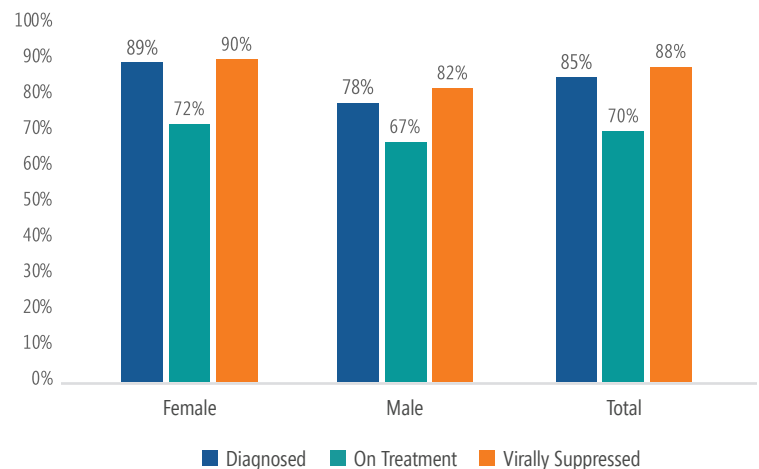

The U.S. government, through the President's Emergency Plan for AIDS Relief (PEPFAR), is partnering with the people and the Government of South Africa to accelerate progress toward achieving HIV/AIDS epidemic control, with a focus on the following priorities:

- Rapidly expanding the provision of lifesaving antiretroviral treatment (ART) to all people living with HIV
- Scaling up evidence-based prevention activities among populations most at risk for HIV – including adolescent girls, young women, and young men – through services provided by the PEPFAR-led Determined, Resilient, Empowered, AIDS-free, Mentored and Safe (DREAMS) public-private partnership and increased coverage of voluntary medical male circumcision among target age groups
- Accelerating HIV treatment service delivery through direct support of human resources for health, including community health workers
- Aligning community-based interventions with facility-based support and rolling out evidence-based interventions to enhance treatment adherence and retention

Progress Toward Reaching Epidemic Control

South African National HIV Prevalence, Incidence, Behavior and Communication Survey Progress to UNAIDS 90-90-90 Targets (15-64 years of age)
