

PEPFAR

U.S. President's Emergency Plan for AIDS Relief

FACT SHEET

Data For Impact

2017

PEPFAR uses data to focus on programs in the geographic areas and populations with the greatest HIV/AIDS burden, maximizing the impact of each dollar invested.

The Challenge

- There is a narrow window of opportunity to reach the **UNAIDS 90-90-90 goals** – 90 percent of people with HIV diagnosed, 90 percent of those diagnosed on antiretroviral treatment (ART), and 90 percent of those on ART virally suppressed by 2020 – and put the world on track to achieve the **United Nations Sustainable Development Goal** target of ending the AIDS epidemic by 2030.

PEPFAR's Impact

- The **PEPFAR Dashboards** demonstrate PEPFAR's commitment to using data to **drive greater impact**, transparency, and accountability. Harnessing the power of data, PEPFAR has improved partner performance and increased program efficiency and effectiveness.
- The **Interagency Collaborative for Program Improvement** brings together experts from **PEPFAR's U.S. government implementing agencies** to analyze, monitor, and move the resources needed to control the epidemic.
- In our efforts to end AIDS as a public health threat, PEPFAR collaborates with various partners to increase impact, transparency and accountability. PEPFAR engages in and supports the **Data Collaboratives for Local Impact**, the **Global Partnership for Sustainable Development Data**, the **Health Data Collaborative**, and **Data2X**.
- As part of the **DREAMS Innovation Challenge**, Data4DREAMS is supporting innovative solutions to fill data gaps and improve data accessibility for policy and program impact.

pepfar.gov | @pepfar    | #EndAIDS2030

PEPFAR is the largest commitment by any nation to address a single disease in history. Through the generosity and compassion of the American people, PEPFAR has saved and improved millions of lives, accelerating progress toward controlling and ultimately ending AIDS as a public health threat.
